

## Reflection Essay

As this is our first group lab, it was a fun experience as we collaborated. We'd like to emphasize that peer discussion is very important and helped us tackle many issues we found while solving the problems or lab. Let's get to the technical details, so we got to see affine and projective transformation in this lab. It was cool to look and perform these transformations, which in turn helped us with better understanding of the concepts. We also did some homography on different images. These helped to cement the concepts more concretely. Tampering with the frame rate of videos, different file formats, linear algebra, and so many more concepts were involved. It did take a little more time than what we anticipated, but we guess that's just the schedule clashing. Let's see, we hope this trend doesn't exceed the deadline.
